Honorary President's Message

Having recently retired in 2013 after 50 years' service with aircraft towing tractor manufacturer Douglas Equipment, one of the founding member companies of BASEA, joining the company as an apprentice engineer, qualifying as a production and mechanical engineer before achieving a post-graduate qualification in management studies and holding positions as Senior Designer, Technical Sales Manager, General Sales Manager and Sales and Marketing Director, as well as serving 3 terms as BASEA Chairman, I was greatly honoured and very humbled when the current Chairman and BASEA Board Members invited me to take up the position of Honorary President of BASEA. I readily accepted the position as not only does it enable me to continue my involvement with this great association and its member companies but I hope it will enable me to give something back to our industry having enjoyed such a long career in it.

Britain has always been a nation of Scientific and Engineering Innovation and Technical Advances. British Innovation came through the era of early agricultural machinery developments, followed by a vast torrent of design and manufacturing developments during the Industrial Revolution. The development and advance of railways and high speed travel was a trial run for the next British achievement – being at the forefront of aviation and electronics. Britain can be proud of the excellence of its products and services in the most technologically advanced industry in the world today – The Aviation Industry.

The Aviation Industry constantly deals with changes and advances - new airline economics, enhanced security, an expanding European Union, an ever changing World and the pursuit of ever lower fuel burns resulting in longer range aircraft and higher payloads. Funding plays its part, but so does innovation and marketing. I am sure that the Industry and BASEA Members will cope with all that confronts us through 2015 - 2016 and beyond and I know that we and our customers worldwide will successfully meet the challenges that globalisation brings.

High quality and competitively priced well engineered and designed products and services, excellent customer service and after sales support together with attention to detail offer the best routes to success. BASEA and its Members have shown and will continue to show, through skilful management of exhibitions, trade missions and other marketing events, that they have created the right climate for business and the promotion of the UK's excellent airport products and services.

In support of the current UK Government and in particular UK Trade & Investments's drive to increase UK exports worldwide we have over the last 12 months run a number of workshops to help member companies increase and enhance their exposure in export markets and assist them in financing and supporting their export drives. Going forward we will continue to offer well structured and very relevant workshops presented by experts in their fields in support of these Government initiatives and I strongly urge all member companies to take advantage of these low cost workshops as I am sure you will find them very helpful in developing and increasing your export business.

This directory and our extensive website, together with events held worldwide every year offer customers good and simple methods for finding the right product or service, the right supplier and the efficient support from UK providers to meet their demanding needs.

I applaud the efforts of BASEA's Board, their Members and Staff in supporting British Industry and for raising the BASEA Members' profiles in the World Airports Market and for showing that "Made in Britain" always means "Good Quality and Excellent Service and Support" as it has always done and I wish you all every success in the coming year.

Mike Doane, Hon. President of BASEA
IEng, MIET, MSAE, DMS, MCIM, FCMI

Chairman's Message

BASEA, now in its 31st year, will as usual undertake to provide an extensive sales & marketing programme for its members, to include: international exhibitions, trade missions, networking and 'meet the buyer' events.

Over the course of the next two years our calendar of events will include amongst others: Exhibitions - Inter Airport Europe, the largest and only truly international airport exhibition, Inter Airport South East Asia which covers the entire South East region of Asia, Aerodrome India in Mumbai and Inter Airport China.

Outward Trade Missions are planned to visit: South America, Romania, Poland, Africa, Malaysia and Indonesia

Networking and Meet the Buyer events: UK Airports' Roadshow, Inwards' Missions from Romania and Poland and hosting UKTI seminars on some of the excellent marketing services they provide, such as, Export Finance and Web Optimisation workshops.

BASEA's trade exhibitions and missions over the last two years have resulted in several millions of dollars of orders for our members. Our survey of Members confirmed that combined airport sector sales exceeded US\$1b, with over 50% of sales coming from overseas' markets. Some individual members reported that they achieved as high as 80% sales from overseas.

Merrick Chrusciel, Chairman BASEA

What can BASEA offer Members

All of BASEA's services are geared towards supporting its members and to assist them in achieving full order books.

Our services include:

- weekly newsletter
- an average of 14-15 International airport tenders per week
- up-to-date news on airport developments, expansions and equipment requirements
- assistance with applying for UKTI grants
- lobbying the UK Government for more financial support to UK companies
- the backing of the UK's longest running Airports' Sector trade association
- the combined experience and knowledge of like-minded companies already exporting to many of the World's airports

Together with the above, we also provide:

- your unique page on our website
- free entry in the BASEA Members' Directory
- the best positions for your stands at the exhibitions we attend
- the comfort of an experienced team to assist you on site at events
- opportunity to graphically display your products and services at all our exhibitions and events

What can BASEA offer the Customer

We can provide the buyer with a 'gateway' to the very best of UK airport supply, demonstrating the finest examples of innovative and excellent quality British goods and services.

Whatever your airport requirement, be it: finance, strategy and planning, design and build, IT systems, management systems, cargo, baggage and people handling, de-icing, seating, fuelling and re-fuelling, GSE equipment, terminal equipment and airfield lighting and maintenance, BASEA members have the combined capability to supply it all.

Our members have a proven track record in supplying to airports worldwide. You can see their products and services demonstrated in most of the International, Regional, Domestic and Military airports of the World.

Some of our members have 'crossed over' from other sectors, such as Marine, rail or automotive, and they brought with them the latest technology, innovation, best practice and experience from those sectors into the airport industry.

Whatever the background of our members you can be assured that the very best of British airport suppliers gather under the BASEA banner and we urge you, via this directory, to contact our individual Members to source the products and services you require.

Should you need any additional help in finding the right product or service for your needs please contact BASEA and, through the combined power of our collective, we should be able to deliver a cost-effective solution to your requirements.

BASEA Membership Application

BASEA, a non-profit making organisation, is committed to supporting its members' efforts in marketing their skills and services worldwide.

The association aims to provide a service to members that represents an excellent cost-effective means of 'getting their message' out to the global community.

BASEA is committed to:

- creating the opportunities to 'meet the buyer'
- providing a 'gateway' between members and prospective customers
- delivering up to the minute information on worldwide airport developments, expansions and international tenders
- continue to lobby the UK Government to support more fully the UK airport sector
- further develop our Trade Partnership with UK Trade & Investment to enable members to benefit from the substantial financial and strategic assistance they provide
- act as a networking tool between members, agents and buyers

Annual Subscription

The annual subscription is £595 + VAT per annum.

NB: For those companies that can demonstrate they have an annual turnover of less than £250K a year the fee is reduced to £350 + VAT.

ACO Technologies plc

ACO's comprehensive product range is designed to help in the creation of integrated drainage solutions. From the collection of water at the surface and on through below-ground geotechnical components, the products can be integrated with each other or with alternative vegetative elements to deliver sustainable surface water management. Many of these solutions are used throughout the modern airport environment overcoming significant design challenges and aesthetic requirements.

Products include high performance stormwater control and award-winning surface water management systems, and hygienic corrosion resistant building drainage solutions. This portfolio ensures airside areas such as airport pavements, runways and maintenance areas, and landside environments including the terminal building, car parks, rail & bus interchanges and road links can be catered for.

Airports International Magazine

Published 9 times a year, Airports International is the world's most widely read audited airport magazine and has gained a reputation for keeping the industry abreast of the most significant international developments and technological innovations.

The magazine offers a lively mix of features covering the construction, finance and management of the world's most important airport development projects, as well as providing information on the technology that makes them tick. Regular industry reports analyse the current airport issues and provide well-researched information to aid the decision-making process.

Available in both printed and digital format, Airports International is free of charge to qualifying industry personnel.

A-SAFE

The Atlas Barrier from A-SAFE was especially designed for airports, and has been tested over and above the level of safety standard that is required in an airport barrier. Made from Memaplex™, A-SAFE's barriers are the most innovative safety barrier system ever. Memaplex™ is a material exclusive to A-SAFE and contains a built-in memory, which means, unlike steel that gets damaged, it reforms back to its original shape after a collision. Because the force of impact is dissipated through the barrier instead of directly to the floor, it enables you to save thousands of pounds of floor damage repair costs.

Gatwick airport slashed their maintenance costs in their North and South baggage halls by installing A-SAFE barriers. They were spending in excess on £100,000 per year on floor damage as a result of collisions with their equivalent steel box beam barrier, but since installing A-SAFE, that cost has dramatically reduced to only £3,000 over three years!

ASI Solutions Ltd

ASI is based in the UK, but has wide international presence in the Airport sector. Rhinophalt is an asphalt preservative proven to extend the life of asphalt surfaces such as airport runways, taxiways, service roads and car parks.

Quick and easy to apply, using specialist applicators, Rhinophalt can be applied to porous, marshall and grooved asphalt surfaces.

Rhinophalt penetrates and seals the surface against water ingress and the effects of UV, increasing stone retention and reducing FOD.

Budgetary pressure, together with the need to minimise disruption and optimise asset utilisation make it essential to preserve asphalt infrastructure.

Babcock International Group

Babcock International Group is a leading international provider of through-life solutions and support services to the airport environment. We deliver the design and operation of baggage handling systems, manage and integrate airport IT systems and optimise critical fleets and ground support equipment (GSE).

We recognise the importance of getting it right first time, and on time, and deliver a range of long-term benefits including:

- Significant cost reductions
- Innovation & best practice
- Uninterrupted availability & uptime
- Whole-life value & optimised asset management
- Improved performance & resilience

Our customers are some of the world's busiest operators, which include Heathrow Airport Ltd, British Airways, Swissport, Dnata and Schiphol airport.

BDP Solutions Ltd

BDP are industry specialists in the design, manufacture and installation of Air Cargo & Material Handling Systems.

Our focus is specific to Air Cargo Handling and covers:

- Throughput analysis
- Feasibility studies
- Turnkey project management
- Construction management
- Systems design, build & installation
- Software & hardware commissioning
- After sales support, with remote diagnostics
- 24/7 maintenance service

Visit our website to view our references and case studies, or download our Equipment Data Sheets for the full specification of our equipment offering. We're here to help - no project is too large or too small.

Emtek Services Ltd

Although Emtek have been manufacturing its own range of Scissors lifts and other products since 2003, the decision was made in 2013 to widen our scope of products and services and we have now taken the opportunity to produce a range of products previously branded Norquip which are distributed throughout the UK, Europe, Africa and the Middle East.

Norquip successfully manufactured from 1991 to 2002 in Norwich and we are delighted after a fourteen year break to have the opportunity once again to offer a Norquip branded product range from Norwich along side our Emtek range of quality products, manufactured by many ex Norquip employees.

Many of the earlier Norquip products manufactured from the facilities in Norwich are still actively in service around the world and given years of reliable operation.

Findlay Irvine Ltd

Findlay Irvine has been manufacturing Transportation Safety equipment for over 50 years. Findlay Irvine offers a range of systems to keep runways open and reduce the risk of accidents. With the market leading and Worlds Number One continuous friction measuring devices, GripTester Mk2 and Helideck micro GripTester, Findlay Irvine products focus maintenance budgets while extending the life of runways while helping runway operators minimise wet skidding incidents and the need for issuing NOTAMS.

Safety on the ground is as important as safety in the air. Findlay Irvine are able to assist airports of all sizes with products that will enable them to maintain the safety of their operations in all conditions.

Jewers Doors Limited

Jewers Doors produces some of the world's largest doors and is widely recognised as the market leader in the field of aircraft hangar doors with our Esavian range of sliding and folding hangar door systems.

We have completed more than 1,000 projects as far afield as South Korea, Qatar, Kuwait, New Zealand, Iraq and Azerbaijan and Jewers Doors has built the main doors for more Boeing 747 and Airbus A380 hangars than any other company.

We operate from our HQ in the UK and our Middle East office in Dubai.

Jewers Doors provides tailored services, ranging from the turn-key design, manufacture and installation of doors, planned maintenance and repair right through to specialist survey and condition reports for aircraft hangar doors.

LPA Connection Systems

LPA Connection Systems provides innovative solutions to airport Ground Power connection issues. Our range includes 28V and 400Hz Ground Power supply connectors that can be easily maintained at the aircraft stand. A replaceable front section further enhances connector life. Remote On/ Off, Reel In / Reel Out functions can be facilitated at the connector through push buttons and LED indicators.

LPA's "Crocodile" Cable Carrier is a ground power cable management system for use on aircraft stands. Benefits include: fast connection times, 1 man operation, rugged construction, easily manoeuvrable, ability to supply a wide range of aircraft on each stand and a compact stored footprint.

Products or services offered:

- 400Hz Ground Power Support Connectors
- 28Vdc Ground Power Support Connectors
- Flanged plugs and sockets

Manbat Ltd

Manbat's specialist airside division provides the full power package from the design and build of apron charging systems (including specification of battery/charger) to servicing, repairs and topping up contracts. With a first time fix KPI of 96%+ supported by a computerised service call system Manbat leads the industry for rapid service response and the ability to give clear, accurate and expert advice.

With its recent acquisition of PowerCell, Manbat Industrial Power Systems has forged the largest and most comprehensive industrial battery sales and service network in the UK. That means more depots, more engineers, more coverage at local level. For the end-user, that translates directly into better support: exactly where and when it's needed.

Pollite

Pollite are considered frangibility experts and provide a full range of frangible masts and poles to support visual and non visual aids near airport runways, taxiways and aprons.

All of our masts are designed specifically to comply with the latest ICAO and FAA requirements on frangibility, deflection and strength. Pollite masts are designed and tested with minimum deflection, and are therefore ideally suited for weather monitoring equipment that need to be mounted at height within the airfield.

As well as Approach Masts, Anemometer Masts and Wind Direction Indicators, we have the resource and expertise to design and manufacture any bespoke requirements that have to comply with both ICAO and FAA regulations.

Tailor Made Systems Ltd

Tailor Made Systems Ltd has extensive experience of the measurement of airfield lighting since 1991.

The MALMS (Mobile Airfield Light Monitoring System) Mobile System was developed specifically to accurately measure the performance of High Intensity Lighting on airfield runways against ICAO and FAA standards.

MALMS Workshop and Photometric Bench Tester Systems can test refurbished airfield lighting within the workshop to confirm that the correct maintenance has been undertaken and that the refurbished light fittings are suitable for use.

The first MALMS system was operational in 1995 and there are now over 100 MALMS Mobile systems in operation around the world.

Observation +
Response +
Analysis +
Evolution =

Heightened Efficiency

making a difference

Ultra Electronics Airport Systems

Ultra is dedicated to the raising of airports' operational efficiency. This is achieved through software tools that embody the Ultra Equation:

Observation: The airport's current state becomes more visible than ever. **Response:** The right actions are taken at the right times, by the right people. **Analysis:** Operational activities are diligently recorded and afforded detailed measurement. Patterns and trends are identified. **Evolution:** The results of analysis are conveyed through a structured reporting mechanism, ensuring strategic insight and confident decision-making. They are also used in the construction of logical workflows, which automate business rules, providing continuously optimised performance.

Added together, these elements result in the **Heightened Efficiency** of an airport, and to the greatest possible enhancements in passenger experience.
